

NOAA Sea Level Rise and Tidal Wetland Restoration Guidance

- Developed by diverse steering committee summer and fall 2010
- Provides 5-step process for evaluating sea level rise impacts on project site and incorporating SLR into project design
- Uses Army Corps methodology for predicting SLR (multiple scenarios)
- Draft guidance under review

Habitat Priority Planner

- Developed by the NOAA Coastal Service Center
- Nationwide GIS-based tool
- Allows testing and mapping of different management scenarios
- Used with C-CAP data to conserve New England Cottontail habitat in coastal Maine
